Sequence 348, Application US/11004590

Publication No. US20060008883A1

GENERAL INFORMATION:

APPLICANT: Lazar, Gregory Alan

APPLICANT: Desjarlais, John R.

APPLICANT: Hammond, Phillip W.

TITLE OF INVENTION: METHODS OF GENERATING VARIANT PROTEINS WITH INCREASED HOST STRING

TITLE OF INVENTION: CONYENT AND COMPOSITIONS THEREOF

TITLE OF INVENTION: CONYENT AND COMPOSITIONS THEREOF

TITLE OF INVENTION: CONYENT ADD COMPOSITIONS THEREOF

FILE REFERENCE: 185832/US/5

binding polypeptides and their encoding polymoclectides. The invention is useful for treating TNR-alpha mediated disease such as sepsis, an autoimmune disease, rheumatoid arthritis, inflammatory diseases, an autoimmune disease, rheumatoid arthritis, inflammatory diseases, conversed and alignate pathologies involving TNR-secreting tumours, alcohol-induced hepatitis, psoriasis, psoriatic arthritis, wester failure, conversed secreting tumours, alcohol-induced hepatitis, psoriatic arthritis, conversed secreting traperfusion injury, chronic obstructive pulmonary disease, pulmonary fibrosis, hepatitis C infection, Kawasaki's pathology, Refsum's disease, parkinson's disease, leukaemias (acute, chronic myelocytic, chronic lywphocytic and/or myelodyspastic syndrome), lymphomas (Hodgkin's, non-Hodgkin's and Euckitt's syndrome), hypokinetic movement disorders, drug-induced movement disorders, crohn's disease, ulcerative colitis, amyotrophic convented disorders, multiple sclerosis, Grave's disease, diabetes consistent and infectious diseases. The invention is also useful in antibody therapy. The present sequence is human hul framework sub-region of heavy chain variable (VH) cregion (FRH) peptide. This sequence is used in the invention.
                                                                                                                                 present invention relates to tumour necrosis factor alpha (TNF-alpha)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TNF-alpha binding; complementarity determining region; CDR; TNF-alpha; immunoassay; CDRL-3; CDRH-3; sepsis; autoimmune disease; rheumatoid arthritis; allergy; multiple sclerosis; systemic lupus erythematosus; scleroserma; diabetes mellitus; cachexia; parasitic disease; infectious disease; sarcoidosis; inflammatory bowel disease; ulcerative colitis; Crohn's disease; allerative colitis; Crohn's disease; Alzheimer, s disease; Down's syndlation; Parkinson's disease; Wegener's disease; Down's syndlation; paoriasis; ankylosing spondylitis; Wegener's granulomatosis; idiopathic pulmonary fibrosis; asthma; graft-versus-host disease; leukemia; human.
binding molecule, useful for treating a TNF-alpha mediated disease such as sepsis, an autoimmune disease, rheumatoid arthritis, and neurodegenerative diseases.

The invention relates to a composition which comprises a TNP-alpha binding molecule having sequence of complementarity determining region (CDR) in 1940t chain variable region (CDR)-3 and sequence of CDR in composition is useful in the heavy chain variable region (CDR)-3. The composition is useful in the treatment of TNP-alpha mediated diseases. TNP-alpha binding molecule is useful for treating sepsis, autoimmune disease, rhematoid arthritis, allery, multiple sclerosis, systemic lupus erythematosus, scleroderma, diabetes mellitus, cachexia, acute and chronic parasitic and/or infectious diseases, sarcoidosis, inflammatory bowel disease, ulcerative colitis, Crohn's disease, disseminated intravascular coagulation, parkinson's disease, Alzheimer's disease, Down's syndrome, psoriasis, ankylosing spondylitis, Wegener's granulomatosis, idiopathic pulmonary fibrosis, asthma, graft-versus-host disease, or leukemia. TNF-alpha binding molecule is useful in diagnostic methods for detecting TNF-alpha in a sample. The present sequence detecting or quantifying TNP-alpha in a sample. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibody; antigen binding fragment; cell culture; variable domain; modified framework region; hypervariable region; cytostatic; antibilitalmantory; antiangiogenic; immunomodulatory; antibody therapy; tumour; inflammatory disorder; antiogenic disorder; immunological disorder; anti-VBGF antibody; antibody; heavy chain; FR1. anti vascular endothelial cell growth factor antibody;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anti-VEGF antibody heavy chain FR1 subgroup III peptide SEQ ID NO:3.
                                                                                         Composition useful for treating diseases such as leukemia, asthma, rheumatoid arthritis, Alzheimer's disease, psoriasis or multiple sclerosis, comprises TNF-alpha binding molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.

WPI; 2005-180802/19.

Disclosure; SEQ ID NO 339; 179pp; English

The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework

antigen binding fragment in high yield in a cell culture. The method comprises expressing a variable domain of the antibody or antigen binding fragment comprises expressing a variable domain of the antibody or antigen binding fragment variable domain crecovering the antibody or antigen binding fragment variable domain crecovering the modified framework from the host cell. The modified FR in the method described above has a substitution of at least one amino acid the method described above has a substitution of at least one amino acid position with a different amino acid, where the different amino acid is the amino acid found at the corresponding FR position of a human subgroup convariable domain consensus sequence that has a hypervariable region!

(HYRI) and/or HYRZ amino acid sequence with the most sequence identity with a corresponding HYRI and/or HYRZ sequence of the variable domain.

(HYRI) and/or HYRZ amino acid sequence of the variable domain.

(HYRI) and/or HYRZ amino acid sequence of the variable domain.

(C) The antibody or antigen binding fragment The antibody and antigen binding fragment in antibody and antigen immunomodulatory activities, and can be used in antibody and antigen methods and compositions of the present invention are useful for methods and compositions of the present invention are useful for the prevention are included the contraction of antique the contraction of a the present invention are useful for the prevention antident or antidention of a the prevention of a producing antident or antidention of the present invention are useful for the prevention of the present invention are useful for the prevention antidention of the present invention are useful for the prevention of the preven
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             particular for improving the yield of recombinant antibodies or antigen binding fragments in cell culture. The antibodies of the invention can be used to diagnose, treat, inhibit or prevent e.g. tumours and inflammatory, analogenic and immunological disorders. The present sequence represents a heavy chain FR1 peptide of an anti-VEGF (vascular endothelial cell growth factor) antibody, which is used in the exemplification of the present invention.
                                                                                                     Producing an antibody or antigen binding fragment in high yield in a cell culture, comprises expressing a variable domain with a modified framework region in a host cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       present invention describes a method for producing an antibody or

New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises a library of nuclectide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 363; 179pp; English.
                                                                                                                                                                                                                                                                                                  Damschroder M;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

```
New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                            DNA library; humanized antibody; antibody engineering; heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; heavy chain; pharmaceutical; peripheral neuropathy; central nervous system disease; neurodegenerative disease; Alzheimers disease; Parkinsons disease; motor neurone disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Length 25;
                                                                                                                                                                                                                                                                                                                          Human antibody heavy chain framework peptide - SBQ ID 372.

RESULT 12

```
The invention relates to binding molecules (SEQ ID Nos 2 and 3) capable of binding to human NegoA polypeptide (SEQ ID No: 5), human NiG polypeptide (SEQ ID No: 5), human NiG comparison of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          retinopathy, age-related macular degeneration, or pathologic myopia. This sequence represents the N-terminal sequence of the heavy chain of mouse 3A6 antibody as determined by sequence degradation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New binding molecule capable of binding to human NogoA polypeptide, human NiG-D20, or human NogoA342-357, useful for treating nerve repair, Alzheimer's disease, Parkinson's disease, or amyotrophic lateral
ocular disease; diabetic retinopathy; age related macular degeneration; myopia; cns-gen; neuroprotective; nootropic; antiparkinsonian; antidiabetic; ophthalmological; 3A6.
                                                                                                                                                                                                                                                                                                                                                                                                                                             Vitaliti A;
                                                                                                                                                                                                                                                                                                                                                                                                                                           Schwab ME,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š
                                                                                                                                                                                                                                                                                                                                                              The invention relates to an antibody molecule having specificity for human tumour necrosis factor-alpha (TNFalpha) comprising a heavy or light contains the antibody or the compound comprising the antibody is useful for treating or manufacturing a medicament for treating a pathology mediated treating or manufacturing a medicament for treating a pathology mediated by TNFalpha, such as rheumatoid or osteo-arthritis. TNFalpha mediated confesses which can be treated by the antibody include sepsis, congestive heart failure, septic or endotoxic shock, cacharda, adult respiratory distress syndrome, septic or endotoxic shock, cacharda, adult respiratory distress syndrome, acquired immunodeficiency syndrome (AIDS), allergies, confessis, inflammatory bone disorders, blood coagulation disorders, burns, rejection episodes following organ or tissue transplant, crohn's disease and autoimmune diseases, such as thyroiditis. The antibodies may also be used to reduce the side effects associated with TNFalpha generation during neoplasty therapy, to eliminate or reduce shock-related symptoms associated with the treatment or prevention of shock-related symptoms associated with the treatment or prevention of shock-related symptoms associated with the treatment or prevention of states and allure, or in the diagnosis and imaging of disease states involving elevated levels of TNF alpha. The present sequence is human compared to the companion of the invention compared to the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                             New antibody specific for human tumor necrosis factor (TNF)-alpha, useful for treating TNF-alpha-mediated diseases, e.g. congestive heart failure, septic or endotoxic shock, cachexia, adult respiratory distress syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human group 3 consensus heavy chain framework region peptide - SEQ 106.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antibody; antiarthritic; antirheumatic; gastrointestinal-gen.; antiinflammatory; rheumatoid arthritis; musculoskeletal disease; inflammatory bowel disease; gastrointestinal disease; inflammation; Crohns disease; immune disorder; heavy chain.

The invention relates to a novel method for preparing an antibody with a cheavy and light chain comprising fermenting a cell mixture, where the cells are capable of expressing the light and heavy chain, separating the cells are capable of expressing the light and heavy chain, separating the cells are capable of expracting the light and producing the pellet to stand for a hold time, extracting the cell pellet, allowing the pellet to cells from the supernatant to for the invention demonstrates antiatrinite, antirheumatic, gastrointestinal-gen. and antiinflammatory activities and may be useful for treatment of rheumatoid arthritis or an inflammatory bowel disease, such as Crohn's disease. Currently used anti-TNR-alpha monoclonal continuation and etanercept, have limited success in the treatment of disease since they must be administered frequently or intravenously. Furthermore, both of these molecules comprise large contraints and as such are difficult and expensive to manufacture. The proteins and as such are difficult and expensive to manufacture. The current sequence is that of a human group 3 consensus heavy chain current sequence antibody targeted to TNR-alpha.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
Preparing a tumor necrosis factor-alpha antibody having a heavy and light chain comprises fermenting a cell mixture, forming a cell pellet and allowing the pellet to stand for a hold time.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA library; humanized antibody; antibody engineering; heavy chain.

```
New library of nucleic acid sequences comprises nucleotide sequences encoding humanized heavy chain variable regions and humanized light chain variable regions, useful for producing humanized antibodies.
                                                                                                                                                                                                                   The invention comprises a library of nucleotide sequences encoding humanized antibody heavy chain variable regions and humanized antibody light chain variable regions. The library of the invention is useful for producing humanized antibodies, or for re-engineering or reshaping an antibody from a first species for use in a second species. The present amino acid sequence represents a human germline heavy chain framework peptide.
                                                                                                                                                                           Disclosure; SEQ ID NO 216; 179pp; English

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
